

## I. Last three weeks progress

- finished an MVP;
- added multiple document chunking methods to improve performance;
- set up no-context generation as a baseline;
- completed evaluation:
  - evaluation metric: cosine similarity with ground truth
  - dimensions: context similarity, final answer similarity
  - comparison: baseline v.s. performances with different chunking methods.
- upgraded the project by making it compatible with more types of document sources

## II. Next week's to-do list

- Improve the interface of the application
- Start writing the final report
