

I. Last week's progress

After talking with Professor Lee, I made a major change in my project by focusing on a use case of Retrieval Augmented Generation. The work done includes:

- a. Looking into the application side of RAG and pivoting the project to making an application that answers investors/stakeholders' questions about a specific earnings report of a listed company.
- b. Searching data available for evaluation
- c. Searching tools and models to make sure it's doable.
- d. Making slides to show in Wednesday's class

II. Next two weeks' to-do list

- File processing
- Text tokenization and embedding
